ProjxAI

Session 1 — Foundation Setup Summary

Collicorp Pty Ltd | ABN 80 398 642 662 | Director: Michael Collicoat

Date: 25 March 2026 | Document Version: 1.0

1. Session Overview

This document captures everything accomplished in Session 1 of the ProjxAI build. Starting from a crashed Railway deployment and an empty GitHub repository, the session established a complete, production-ready development environment and launched the website live on the real domain projxai.com.au.

All credentials, service connections, folder structures, and next steps are documented below for reference at the start of Session 2.

2. What Was Accomplished

2.1 GMKtec Development Machine — Mission Control

The following software was installed and configured on the GMKtec NucBox EVO-X1 (Windows 11 Pro, username: mcoll):

- Node.js v25.8.2 with npm 11.11.1
- Python 3.14.3 and Visual Studio 2026 Build Tools (via Chocolatey)
- Git 2.53.0.2 (already installed)
- VS Code 1.112.0 (already installed)
- Claude Code CLI v2.1.81 — authenticated to michaelc@collicorp.com.au Pro account
- KeePassXC — encrypted local credential vault
- Malwarebytes + Windows Defender — dual AV protection
- BitLocker encryption enabled on C: drive
- Google Drive desktop sync — backs up C:\Collicorp\ automatically
- Chrome set as default browser — Cowork extension installed and ready

2.2 Folder Structure

Item	Value / Location	Notes
Projects root	`C:\Collicorp\projxai\`	All website code lives here

Credential vault	`C:\Collicorp\.Vault\`	KeePassXC .kdbx file stored here
Google Drive sync	`C:\Collicorp\`	Entire folder syncs to Google Drive
Environment file	`C:\Collicorp\projxai\.env`	Local env vars — never commit to git

2.3 Website Infrastructure

Item	Status	Notes
GitHub repo	Active	muckerby/projxai-nextjs-sanity — main branch
Local dev server	Running	localhost:3000 — Next.js 16 + Turbopack
Vercel deployment	Live	projxai-nextjs-sanity.vercel.app — auto-deploy on push
projxai.com.au	Live / Propagating	DNS via Cloudflare — SSL generating
projxai.com	Pending setup	Added to Cloudflare — DNS records needed
Sanity CMS	Active — Trial	Project: ProjxAI — 30 day Growth Trial
Stripe	Sandbox only	Collicorp account — AUD — test mode
Railway	To be deleted	Old deployment — no longer needed
Netlify	To be deleted	Old site — no longer needed

3. Service Credentials & Identifiers

All sensitive credentials (API keys, tokens, passwords) are stored in KeePassXC. The values below are non-sensitive identifiers safe to record in this document.

3.1 GitHub

Item	Value / Location	Notes

Username	`muckerby`	GitHub account owner
Repository	`projxai-nextjs-sanity`	Main website repo
Branch	`main`	Production branch — auto-deploys to Vercel
PAT location	`KeePassXC vault`	90-day expiry — repo + workflow scopes

3.2 Vercel

Item	Value / Location	Notes
Account	`muckerby's projects (Hobby)`	Free tier — sufficient for current scale
Project name	`projxai-nextjs-sanity`	Connected to GitHub main branch
Production URL	`projxai-nextjs-sanity.vercel.app`	Always-on fallback URL
Custom domain	`www.projxai.com.au`	Primary domain — live
Env vars set	`3 Sanity variables`	See .env file in project root

3.3 Sanity CMS

Item	Value / Location	Notes
Organisation	`Collicorp`	Master Sanity organisation
Project name	`ProjxAI`	Active — Growth Trial (30 days)
Project ID	`zma68sbk`	Used in .env and Vercel env vars
Organisation ID	`ooMfy8zSa`	Collicorp org identifier
Dataset	`production`	Standard dataset name
API token	`KeePassXC vault`	Generate after trial — store in vault

3.4 Cloudflare

Item	Value / Location	Notes
Account	`Michaelc@collicorp.com.au`	MC Cloudflare Master Account

collicorp.com.au	`Active — configured`	Existing domain — already set up
projxai.com.au	`Active — pending verify`	Nameservers updated to Cloudflare
projxai.com	`Added — DNS needed`	Nameservers updated — add A + CNAME
Nameservers	`jermaine + lisa .ns.cloudflare.com`	Both domains pointing here

3.5 DNS Records — Required for Both Domains

Add these records in Cloudflare for both projxai.com.au and projxai.com:

Type	Name	Content	Proxy Status
`A`	`@`	`76.76.21.21`	Proxied (orange)
`CNAME`	`www`	`cname.vercel-dns.com`	DNS only (grey)

3.6 Stripe

Item	Value / Location	Notes
Account name	`Collicorp sandbox`	Test mode only — not yet live
Currency	`AUD`	Australian dollars
Publishable key	`KeePassXC vault`	pk_test_... prefix
Secret key	`KeePassXC vault`	sk_test_... prefix — never expose

---

4. Environment File (.env)

Location: C:\Collicorp\projxai\.env — this file is gitignored and never committed to GitHub.

Current contents:

```
NEXT_PUBLIC_SANITY_PROJECT_ID=zma68sbk
NEXT_PUBLIC_SANITY_DATASET=production
NEXT_PUBLIC_SANITY_API_VERSION=2024-01-01
```

These same three variables are also set in Vercel under Project Settings > Environment Variables.

5. Security Configuration

Item	Status	Notes
BitLocker	Active	C: drive encrypted — saving to Google Drive
Windows Defender	Active	Real-time protection on
Malwarebytes	Active — Score 81	Good rating — 2 tips to improve
Secure Boot	Pending reboot	Enable in BIOS on next restart (Del key)
KeePassXC vault	Active	C:\Collicorp\.Vault\collicorp.kdbx
Google Drive backup	Active	C:\Collicorp\ syncing automatically
API key discipline	In progress	Use claude config set apiKey (no inline)
Chrome passwords	To migrate	Move all saved passwords to KeePassXC

6. Claude Tools Configuration

6.1 Claude.ai (this chat)

Used for strategy, planning, content writing, and directing work. Runs in Anthropic cloud. No direct access to local files.

6.2 Claude Code CLI

Item	Status	Notes
Version	v2.1.81	Installed globally via npm
Auth method	Claude Pro subscription	michaelc@collicorp.com.au
Model	Sonnet 4.6	Included in Pro plan

Working directory	C:\Collicorp\projxai\	Navigate here before starting sessions
Init command	Pending	Run /init to create CLAUDE.md in Session 2

To start a Claude Code session on the projxai project:

```
cd C:\Collicorp\projxai
claude
```

6.3 Cowork (Claude in Chrome)

Installed as a Chrome extension. Used for browser automation — navigating dashboards, filling forms, configuring services. Runs on the local GMKtec inside Chrome. Access via the Cowork tab in the Claude desktop app.

---

7. Next Steps — Session 2 Priorities

7.1 Immediate (start of Session 2)

1. Reboot GMKtec and enable Secure Boot in BIOS (tap Delete on boot)
2. Add DNS records for projxai.com in Cloudflare (A record + CNAME — same as .com.au)
3. Add projxai.com as custom domain in Vercel (same as .com.au process)
4. Run /init in Claude Code inside C:\Collicorp\projxai\ to create CLAUDE.md
5. Delete old Railway project and Netlify account

7.2 Phase 2 — Site Customisation

- Replace 'Startup' template branding with ProjxAI logo, colours, and name
- Rewrite all page copy — Home, About, Services pages
- Configure Sanity CMS schemas for blog and content management
- Build the /tools page and ROAS Calculator widget
- Set up email capture connected to the ROAS Calculator result
- Register for B2B SaaS affiliate programs (Triple Whale, A2X etc.)

7.3 Phase 3 — Cash Flow Engine

- Build the $99 Competitor Espionage Engine landing page
- Set up Make.com automation: Stripe payment -> Apify scraper -> AI analysis -> PDF delivery

- Switch Stripe from sandbox to live account
- Launch first Meta/LinkedIn ad campaign ($100-300/month budget)

8. Business Context

8.1 ProjxAI — Brand Overview

ProjxAI is the first revenue-generating brand under Collicorp Pty Ltd. It helps Australian SMEs understand and implement AI in their business — acting as an AI consultancy and toolkit platform.

Item	Value / Location	Notes
Entity	`Collicorp Pty Ltd`	ABN 80 398 642 662
Director	`Michael Collicoat`	Brisbane, QLD, Australia
Brand	`ProjxAI`	First Collicorp subsidiary brand
Primary domain	`projxai.com.au`	Australian market focus
Secondary domain	`projxai.com`	International / global
Target market	`Australian SMEs`	Businesses without in-house AI capability
Income target	`$10k-$20k/month`	12-24 month timeline

8.2 Income Model

Item	Value / Location	Notes
Passive — Affiliate	`Phase 2`	B2B SaaS commissions from ROAS Calculator traffic
Active — Digital product	`Phase 3`	$99 Competitor Espionage Engine — automated
Consulting	`Phase 3+`	High-ticket AI audit and implementation — $1,500+ entry
Ad budget available	`$100-500/month`	Goes entirely to Espionage Engine ads in Phase 3

This document was generated at the end of Session 1 on 25 March 2026.
